

OAG Environmental Policy

OAG is a specialist structural glazing contractor which offers in-house design and structural engineering services

The scope of the Environmental Management System applies to the business activities related to the products and services undertaken by OAG and its construction sites.

OAG endeavours to pursue a strategy that not only encompasses all our activities, but also considers how these can affect and be affected by our interested parties.

OAG ensures that all activities carried out by the organisation comply with all relevant environmental legislation.

The organisation is committed to continuously improve our environmental performance through the support and involvement of all employees and any other interested parties. In recognition of this we aim to:

- *reduce the amount of energy used in our office, as well as on site, through controlling energy wastage and increasing efficiency.*
- *promote the usage of materials with recycled content and sourced from suppliers certified to ISO 14001 or other recognised Environmental Management certification schemes.*
- *reduce the amount of waste by ordering pre-fabricated off-site materials, where possible.*
- *promote the waste hierarchy to reduce the amount of waste created as a result of our operations; re-use products and materials where possible; and improve the sorting and recycling of remaining waste to minimise waste sent to landfill.*
- *encourage our suppliers to implement an Environmental Management System.*

We shall only procure timber and other wood-based products from FSC or PEFC certified sources.

We shall support clients and projects undergoing relevant Environmental Assessment Methods, including BREEAM, LEED, SKA and WELL, and seek opportunities to improve our contribution to the projects' performance.

This policy will be reviewed on a yearly basis and communicated to all employees and suppliers and published on our website.

*A Grey
Managing Director*
